## 1.4 SQL Basics - DML

# Module Overview

1.1 Introduction to Data Science

1.2 Introduction to Database

1.3 SQL Basic - DDL

1.4 SQL Basic - DML

1.5 SQL Advanced

1.6 Introduction to Numpy

1.7 Introduction to Pandas

1.8 Exploratory Data Analysis (EDA) Basic

1.9 EDA Advanced

1.10 Data Visualisation

# Recap, Self-Study and Prework

- What are `environment.yml` files used for?
- What is the command to create a conda environment from a `environment.yml` file?
- Why must you activate an environment before use?
- What is the command to export your current dependencies to ``environment.yml`` file?

# Recap, Self-Study and Prework

- Describe the following SQL DDL statements
  - CREATE
  - ALTER
  - DROP
  - UPDATE
  - COPY
- What are indexes useful for?
- What is the difference between a Table and a View?

# Lesson Objectives

- SQL Data Manipulation Language (DML) statements
- Operators and Functions
- Filters and Sorting
- Aggregate functions and **GROUP BY**
- Advanced operators and functions

# SQL Data Manipulation Language

# Lesson Plan

1. Connecting to database
2. Querying data
  - Use operators and functions
  - Add filters and sorting
  - Use aggregate functions
  - Use GROUP BY and HAVING clause
  - Add logic conditions to query

# Connecting to the Database

- Refresh the GH repository with `git pull`
- Directly use the updated db/unit-1-4.db
  - Open DBeaver and create a new connection to the DuckDB database file db/unit-1-4.db

What did you learn today?

# End of Lesson 1.4 - Exit Ticket
